Solving Quadratic Equations

Solve each equation by finding square roots. If the equation has no real solution, write *no solution*. If necessary, round to the nearest tenth.

52. You want to build a fence around a square garden that covers 506.25 ft^2 . How many feet of fence will you need to complete the job?
53. The formula $A = 6s^2$ will calculate the surface area of a cube. Suppose you have a cube that has a surface area of 216 in.^2 . What is the length of each side?
54. You drop a pencil out of a window that is 20 ft above the ground. Use the formula $V^2 = 64s$, where V is the speed and s is the distance fallen, to calculate the speed the pencil is traveling when it hits the ground.
55. Suppose you are going to construct a circular fish pond in your garden. You want the pond to cover an area of 300 ft^2 . What is the radius of the pond?
56. During the construction of a skyscraper, a bolt fell from 400 ft. What was the speed of the bolt when it hit the ground? Use $V^2 = 64s$.
